

Reports

Cloud Amber's vision is to provide products that enable Traffic Managers to model, monitor and control the environmental effects of travel as well as reducing congestion to maximise the use of a limited road network. The Cloud Amber reporting package is very flexible and allows users to configure and run system based reports. Cloud Amber does not believe in a 'Standard Set' of reports. Every authority has different congestion problems, different areas to focus on and different needs from their UTMC system.

Key features and benefits:

- **Proven to save time, cost and revenue**
- **Fully customised to each authority**
- No specialised skills required
- Infinitely flexible solution
- Stable and reliable solution
- Fully integrated technical solution
